

Sanitary Pressure Regulators

Both the FB6C & FB5C are designed to regulate pressure in systems requiring the maintenance of sanitary conditions. They are suitable for a range of applications, including CIP, SIP, centrifuges, autoclaves, culinary equipment, sterilizers, process tanks and more.

FB6C Series Pressure Regulators

The FB6C operates by sensing pressure under the diaphragm on the downstream side of the seat.

FB5C Series Back Pressure Regulators

The FB5C operates by sensing the inlet pressure, or back pressure, beneath the diaphragm.
