

Mark 87 Series

External Piloted Temperature Regulators

The Mark 87 piloted temperature regulator is the Sliding Gate valve engineered to provide wide rangeability and greater accuracy for a variety of temperature control applications. Designed with the same technology as the industry leading, self-contained Mark 80, the Mark 87 is a piloted temperature regulator that offers quality and performance unparalleled by any competitive products on the market.

OPERATION

The operation of the Mark 87 relies on a unique liquid-vapor combination system. Due to the nature of this type of fill, the thermal operating system is capable of delivering far more operating power than the simple liquid expansion systems used on other temperature regulators. In addition, it is able to operate from the temperature of the process itself and does not require the added expense of temperature controllers or the piping of plant air. This valve is available with both direct acting and reverse acting pilot valves.

The direct acting pilot valve is normally open, allowing upstream pressure to force the main diaphragm down to open the main valve seats. As the process temperature approaches the desired setting, the fluid in the bulb vaporizes, creating the necessary pressure on the pilot diaphragm to throttle the pilot valve toward the closed position. The reverse acting pilot is normally closed and opens on an increase in temperature.

While identical to the Mark 80 in many ways, the piloted Mark 87 can provide more accurate control, and is available in large line sizes (1/2" – 6"). It can be used where larger line sizes and higher flow rates are required. The Mark 87 is available in a wide variety of body materials, end connections, temperature ranges, and bulb configurations.

FEATURES

- Sliding Gate Seats – All of Jordan Valve's pilot-operated temperature regulators feature advanced sliding gate seat technology
 - Straight-through flow for reduced turbulence, longer life and quiet operation
 - Short stroke for fast response and accurate regulation
 - Easily interchangeable Cv's
 - Extended tight shutoff due to wear resistant coatings and overlap of seat closure area

SPECIFICATIONS

Sizes: 1/2" through 6" (DN15 through DN150)

End Connections

- Threaded
- Companion Flanges (1/2" – 2") (DN15 – DN50)
- Integral Flanges (2-1/2" – 6") (DN65 – DN150)

Body Materials

- Ductile Iron
- Cast Iron
- Carbon Steel
- Stainless Steel

Trim Materials

- 303SS for DI, BRZ & CS body valves
- 316SS for SS body valves

Seat Materials

- Jorcote on SST – Standard
- Jorcote/Jordanic on SST – For severe service
- Chrome Plated SST – Optional (1/2" - 2" only)

Diaphragm: Stainless Steel

Stem Packing

- Spring-loaded Teflon (500°F max/260°C)
- Braided (above 500°F/260°C)

Thermal System

- Actuator: Type SWA, 304SS
- Capillary: 8' (2,4 m) copper standard. Available up to 100' (30,5 m) in Stainless Steel

Armor

- SST – standard
- Other materials upon request

Sensing Bulb

- Copper – standard
- SST – optional
- Other materials upon request

Shutoff: ANSI Class IV

Temperature Gauge: Optionally mounted on pilot actuator (87T)

Action

- Direct (increase in temperature closes valve – fails open)
- Reverse (increase in temperature opens valve – fails closed)

Body Rating: Ductile Iron up to 725 psi (50 bar) (except 2-1/2" – 6") & 650°F (343°C); Cast Iron up to 500 psi (35 bar) & 450°F (232°C); Carbon Steel and Stainless Steel up to 725 psi (50 bar) (except 2-1/2" – 6") & 650°F (343°C) depending upon specific construction. -20°F (-29°C) temperature limits on all materials. For other temperatures, please consult factory.

Temperature Control Ranges

10 - 55°F (-12 - 13°C)	35 - 90°F (2 - 32°C)	55 - 115°F (13 - 46°C)	80 - 140°F (27 - 60°C)
120 - 185°F (49 - 85°C)	160 - 225°F (71 - 107°C)	205 - 260°F (96 - 127°C)	230 - 290°F (110 - 143°C)
265 - 325°F (129 - 163°C)	315 - 400°F (157 - 204°C)	375 - 440°F (190 - 227°C)	

Note: a minimum pressure differential of 25 psi (1,7 bar) from valve inlet to outlet is required in order for the valve to operate properly. Consult factory if lower differential exists.

Overheat Protection: 100°F (37,7°C) over top of range

Cv (Kv) Values & Maximum Differential Pressures

Valve Size		Flow Coefficient		Seat Material	Max ΔP	
Inches	DN	Cv	Kv		PSI	Bar

* Low flow trim available with Cv 2.5 (Kv 2,15) being the lowest permissible value

Bulb and Well Dimensions

Bulb/Well Type	Nominal Bulb Size (diameter x length)*	
	101°F (38,3°C) or above	100°F (37,7°C) or below
Bulb Type A & B	1" x 12" (25mm x 305mm)	1" x 14" (25mm x 356mm)
	3/4" x 23" (optional) (19mm x 584mm)	3/4" x 27" (optional) (19mm x 686mm)
Bulb Type C	1" x 12" (SST only) (25mm x 305mm)	1" x 14" (SST only) (25mm x 356mm)
	1-1/8" x 14" (Copper only) (29mm x 356mm)	1-1/8" x 14" (Copper only) (29mm x 356mm)
Bulb Type D - E - F	1" x 12" (25mm x 305mm)	1" x 14" (25mm x 356mm)
Well Type A (Standard)	To fit bulb with 1" NPT tank fitting	
Well Type B (Flanged)	To fit bulb with 1-1/2" or 2" x 150/300# flange	

Also Available: Jordan also makes the MK87P, which utilizes a pressure pilot as well as a temperature pilot. Consult factory for details.

FEATURES & BENEFITS

- Wide rangeability
- Highly accurate
- Unique liquid vapor combination system
- Seal-welded actuator
- Sliding gate seat
- Requires no external power source
